Supplementary Tables

Anonymous Author(s)

This document contains the tables cited as Supplementary Tables S1–S12 in the anonymous manuscript. The numbering is independent of the tables retained in the 12-page paper.

Table S1: Dataset statistics under the absolute-time sliding-window temporal cold-start protocol. Each dataset is divided into five chronological windows $W_1, \ldots, W_5$. We evaluate on Test Window W_3, W_4, and W_5, where each test window uses its preceding windows for training and validation. Cold ratio denotes the cold-item proportion in the corresponding test split.

Dataset	Split	Train window	Test window	Train sequences	Val sequences	Test sequences	Test targets	Cold ratio
Test Window W_3								
Beauty	1	W_1	W_3	12	5	56	254	0.984

Table S9: Oracle-prefix probing for semantic ID generation. We report both next-item semantic ID generation accuracy and next-token semantic ID generation accuracy. "Free" denotes standard autoregressive decoding, while "Oracle-prefix" decoding forces the corresponding ground-truth prefix before generating the remaining tokens. Δ denotes the absolute improvement over free decoding. Darker red indicates larger improvement.

Dataset	Group	Ratio	Next-item SID generation					Next-token SID generation						
			Free	Oracle c_1		Oracle c_1, c_2		c_1 Acc.	c_2 Acc.			c_3 Acc.

Table S10: Distributional alignment between TIGER prefix generation and SASRec bucket-aggregated scoring. Each row compares the TIGER prefix distribution $P_T(\cdot)$ with the SASRec bucket distribution $P_S(\cdot)$ at the corresponding semantic-ID prefix level. Lower JS divergence and higher Pearson correlation indicate stronger alignment.

Table S12: Extended tokenizer-by-prediction session-wise Hit@20 on seven datasets. Bold denotes the best result for each dataset and target group. Values are point estimates; seed counts and variance are pending.
